GLADIOLUS

PRICE LIST

Season 1933

FOREWORD

Many thanks are again extended for your orders and many kind words of appreciation. In keeping with the times, prices have been materially reduced this season, but you will find the quality up to my usual standard, and I will guarantee satisfaction. I will duplicate any special offers of other growers in the varieties I grow and quote special prices on larger quantities. If you have never bought glads from me, just give me a trial order and if you are not more than satisfied, I will refund your money.

TERMS: Cash with order or a 25% deposit if future delivery is desired. I do not substitute but refund any part of order I cannot fill. I believe in extra count.

SHIPMENT: I ship any time. No orders taken for bulblets after April 1st, for planting size after May 1st, and for large bulbs, after June 1st. Can furnish assorted or mixtures until July 1st. Postage prepaid.

DISCOUNT: When cash accompanies order the following discounts can be taken:

\$10 to \$25—20% of the amount of your order additional, your selection from Price List.

\$25 to \$50—30% of the amount of your order additional, your selection from Price List.

On orders over \$50, write for special quotations for entire lot.

Where rate per 10 is given only, take one-tenth to find single rate. To find 100 rate multiply 10 rate by 7.

No single item less than 5 cents.

Quantity Prices on Request

SPECIAL COLLECTION OF ASSORTED GLADS

Many folks desire a few "glads" to plant in the garden and do not care to fuss with the names of the varieties, just merely grow them for cut flowers. For this purpose I am offering a special collection of assorted named varieties but not labelled. Of course if you have a preference or dislike for certain colors, just mention it, and I'll act accordingly. If after blooming time you are not satisfied and pleased in every way, the purchase price will be refunded and no questions asked. Cultural directions accompany each order.

200 bulbs	\$3.50	50 bulbs	\$1.25
100 bulbs	2.00	25 bulbs75

Size one inch and over, sure to bloom. All prepaid.

Why not send in your order now before you forget!

Will hold and ship any time you say.

Arthur A. Arenius

GLADIOLUS GROWER

THRIP AND ITS CONTROL

Two essential factors enter into the control of Thrips—the planting of clean or Thrip free bulbs and proper spraying, and the following suggestions are offered. Use caution when digging bulbs of thrip infested plants to prevent Thrips from spreading from plants to bulbs. Cure in a warm dry, airy place, remove old bulbs and roots and store in a cool storage at a temperature from 35° F. to 50° F. If there is any sign of Thrip on bulbs effort should be made to rid the Thrip from bulbs in storage. This can be accomplished by scattering Napthalene flakes at the rate of ½ handful to 100 large bulbs and cover containers holding bulbs with newspaper or put bulbs in an air tight compartment or box. During the period of cool storage Thrip remains inactive but does not die out therefore just before planting time it is wise to soak the bulbs with Corrosive Sublimate (1000 to 1) or 1 oz. to 7½ gals. of water using wooden or earthenware containers for a period of 6 to 12 hrs. Ordinary Household Lye, 1 lb. to 20 gals. of water soaking overnight is also effective.

Thrip on the growing plants can be detected by light lines or whitish streaks appearing on the leaves. It is well to commence spraying early, when foliage is about a foot high and to keep the foliage covered until plants begin to bloom. I used the following spray successfully last season. Black leaf 40, Arsenate of Lead and molasses as recommended for potatoes. The idea being to use the Black Leaf as a contact spray and the Arsenate as a poison making it more palatable with the molasses. However, **Cubor, Tonacide, Derrisol** are recommended as being effective also. In small gardens, spraying the plants with the garden hose every evening has kept the Thrip down. Use plenty of force and play the hose right on the plants which seems to drown out the Thrip. Thrips are warmth loving insects and increase rapidly during hot, dry spells. Spraying is also most effective during warm sunny days as they will be then found on the foliage feeding in the greatest numbers. Urge your neighbors to soak their bulbs and spray the plants if there is any signs of Thrip infestation and I am sure fine blooms will be the result.
